### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

***Election/Restrictions***

Applicant's election without traverse of Species X in the reply filed on 9/27/04 is acknowledged.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 20-22, 69, 71, 74 and 75 are rejected under 35 U.S.C. 102(e) as being anticipated by Thompson et al. (US 6152920). Thompson et al. disclose a method for epicardial ablation comprising the steps of gripping the epicardial surface with a gripper (figure 26) device comprising a plurality of arms, each arm having an inner and an outer surface, at least one of the arms is moveable and an ablator disposed on the inner surface of one of the moveable arms.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3739

Claim 70 is rejected under 35 U.S.C. 103(a) as being unpatentable over Thompson et al. (US 6152920). Thompson et al. teach all of the limitations of the claims except encircling the heart with the gripping device. Thompson establishes that it is old and well known in the art to treat the exterior surface of the heart, therefore, it would have been an obvious choice to an artisan at the time the invention was made to encircle the heart based on the condition being treated.

Claims 23, 24, 25, 72 and 73 are rejected under 35 U.S.C. 103(a) as being unpatentable over Thompson et al. further in view of Cox et al. (US 6161543). Thompson et al. teach all of the limitations of the claims except applying the various types of energy to the device. Cox et al. disclose a similar method and teach the functional equivalence of providing the various types of energy interchangeably as claimed (col. 8 lines 26-37). Therefore, in view of the fact that a functional equivalence exists between the application of the various energy types, it would have been an obvious step to one having ordinary skill in the art at the time the invention was made to provide either of the types of energy as a mere design choice.
